

Stock Standard Paint Coating Systems

AW100

.7 mil nominal top coat | .2 mil nominal primer | Substrate

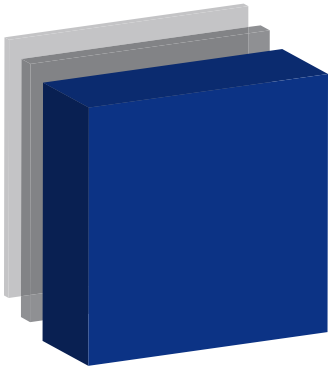

High durable Imperial White composite polyester resin coating formulated for use in most exterior or interior environments. The 25-30% gloss reduces interior artificial lighting requirements and the finish is easily cleaned with approved detergents. The AW100 coating system is tough enough to resist scratching, yet flexible enough to be embossed and formed.

AW500

.7 mil nominal top coat | .2 mil nominal primer | Substrate

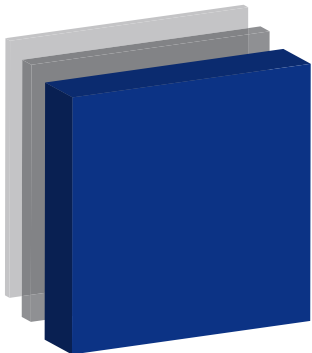

Work horse exterior silicone modified polyester resin coating provides superior resistance to chalk and fade. Ceramic pigments help maintain color retention. The long term exterior weathering performance makes the AW500 coating system an ideal choice for most industrial and commercial applications.

AW750

3.8 mil nominal top coat | .2 mil nominal primer | Substrate

Thick film polyvinylchloride (PVC) coating is the perfect solution for corrosive environments. Although it can be used for exterior roof applications in extreme climates, it is the economical solution for interior wall and ceilings requiring routine wash down.

AW1000

.7 mil nominal top coat | .2 mil nominal primer | Substrate

Premium fluoropolymer (PVDF) coating containing 70% Kynar 500 or Hylar 5000 proprietary resins. AW1000 is a 2-coat high performance paint system that provides outstanding resistance to ultraviolet radiation. It also offers exceptional abrasion resistance compared with "softer" PVDF finishes.

All Weather Insulated Panels offers factory coating solutions for a multitude of building designs and performance requirements. Equipped with the latest cool color pigment technologies and a variety of specific formulations to protect your building envelope from the outside or the inside, AWIP has the paint system equal to the task.

Contact your AWIP Representative to determine which of these coating systems will fit your next project.
